

# ACS LIST

We use BlueSpier whiteboard to list all the details of ACS patients who require an intervention including a diagnostic angiogram, PCI, and pacemakers. There is also a hold list for patients who need intervention but are not quite ready due to limiting health conditions (i.e. heart failure preventing them from being able to lie flat.)

As an ACS SHO, it will be your responsibility to update the list with any patients who need to go to the cath lab. You will also need access to this during the board round.

**Where do you find this:** BlueSpier Desktop Icon

For instructions on how to add a patient to BlueSpier click the link below:
